

Buddha Installation

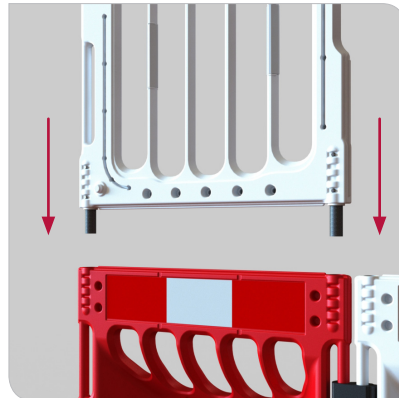

The Buddha Barrier is a uniquely designed, completely anti-trip Water Filled Separator. At 0.8 m in height, it creates a safer environment for pedestrians over traditional Water Filled Separators.

Basic Installation:

- 1]** Place each Buddha in a Red & White order and connect them together using the S-Clip on the side.
- 2]** Using one of the holes at the top, fill each barrier up with water.
- 3]** When water can be seen coming from the overflow holes, stop the water filling.

Top Panel Installation:

- 1]** Align each DoubleTop leg with the open holes, and push the Panel down into the Barrier.
- 2]** The direction for installation is determined by which side the hole for the Hook is on. This always come first. No Coupler is required.

NB. DoubleTop can go into the Buddha either way.
